FILE TERMINOLOGY

COARSENESS

Bastard Cut

Second Cut

Smooth Cut

- Work to be accomplished, roughing or finishing will determine type of teeth and coarseness of each application
- Most American pattern files are available with 3 grades of cut : bastard-cut, second-cut and smooth-cut
- The degree of coarseness is greater in longer files, but differences between bastard, second and smooth are proportionate

LENGHT

- Length is measured exclusive of tang, from point to heel, unless otherwise specified
- Desired stroke length, type of material and size will determine length required

SHAPE

- Area to be filed will determine specific cross-section (round, half-round, flat, etc.) to be used

Kind of Teeth Single Cut

- Single set of parallel, diagonal rows of teeth
- Single-cut files are often used with light pressure to produce a smooth surface finish or to put a keen edge on knives, shears or saws

Double Cut

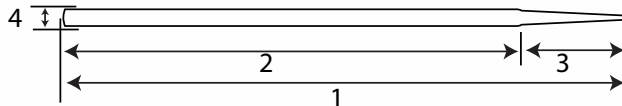

- 2 set of diagonal rows of teeth
- Second set of teeth cut in opposite diagonal direction and on top of the first set
- First set of teeth is known as the overcut, second is known as upcut
